Tulsi Chaudhari

Full Stack Developer

Portfolio:
github.com/Tulsi-Chaudhari-16
linkedin.com/in/tulsi-chaudhari-04333b28a

Computer Science undergraduate at VIT Bhopal University with strong interests in Machine Learning, Software Development, Healthcare AI, and Full-Stack Development. Experienced in building intelligent applications, automation systems, and healthcare solutions using Python, Java, Deep Learning, and modern web technologies. Seeking opportunities to apply technical skills to solve real-world problems while continuously learning and contributing to innovative projects.

SKILLS

Languages: C++, Java, Python, JavaScript, SQL, HTML, CSS

Frameworks & Libraries: Spring Boot, Node.js, Express.js (Basic), EJS, TensorFlow

Databases: MySQL, SQLite, Firebase

Tools: Git, GitHub, Android Studio, Tkinter

Domains: Machine Learning, Deep Learning, Web Development, Mobile App Development, Healthcare AI, OCR, Image Processing

EXPERIENCE

Python Developer Intern | CODESOFT

Feb 2024 – Mar 2024

- Worked on Python-based development tasks and automation projects.
- Improved problem-solving and software development skills through practical assignments.

Summer Intern | Siemens

May 2025 – Jun 2025

- Developed a PCB Quality Assurance Automation System.
- Automated inspection workflows using Python, OCR, SQLite, and image processing.
- Reduced manual effort and improved manufacturing inspection efficiency.

Core Member, Event Management (Anchoring) | StartUP Club

Apr 2024 – 2025

- Coordinated startup-related events and conducted anchoring activities.
- Assisted in organizing student entrepreneurship initiatives.

Lead of Operations Team | Music Club

May 2024 – Present

- Managing club operations and event coordination.
- Leading team activities and ensuring smooth execution of club events.

PROJECTS

PCB Quality Assurance Automation System

May 2025 – Jun 2025

Developed a desktop-based PCB Quality Assurance Automation System to improve component inspection and quality control processes in electronics manufacturing. Automated the integration and processing of log files, Excel datasets, reference images, and database records to enable efficient component tracking and analysis. Implemented OCR-based GF number extraction, interactive status updates, and color-coded visualization of component conditions through a user-friendly GUI. Designed the solution using Python, Tkinter, SQLite, Pandas, and image processing techniques, creating a scalable platform that improved inspection efficiency, reduced manual effort, and supported large-volume manufacturing workflows.

Technologies Used: Python, Tkinter, SQLite, Pandas, OCR, Image Processing

ParXon – An App for Parkinson's Patients

Sep 2024 – Jan 2025

Developed ParXon, a mobile healthcare application designed to support Parkinson's patients through structured and stage-specific exercise assistance and improved daily health management. Integrated a voice assistant using Text-to-Speech (TTS) and Speech Recognition technologies to provide guided exercises and enable hands-free interaction. Implemented medication reminders along with notification support for family members and caretakers to enhance treatment adherence and patient monitoring. Added wellness-focused features including a BMI calculator, water intake tracker, and interactive cognitive games to encourage engagement and improve patient well-being. The application focused on enhancing digital healthcare accessibility through assistive technology.

Technologies Used: Java, Android Studio, Firebase, MySQL, PHPMyAdmin, Text-to-Speech (TTS), Speech Recognition

MediHeart – Web Application for Congenital Heart Defect Classification

Sep 2025 – Mar 2026

Developed a web-based healthcare platform for the classification of Congenital Heart Defects (CHDs) using chest X-ray imaging and deep learning techniques. Contributed to frontend-backend integration by implementing RESTful API communication, JWT-based authentication, session management, and secure handling of patient and scan data. Worked on the development and evaluation of DenseNet121 and EfficientNetV2 models using transfer learning to classify chest X-rays into Normal, ASD, and VSD categories. Optimized preprocessing, augmentation, and model fine-tuning workflows, achieving classification accuracies of 87.23% and

88.30% respectively. Designed the system to support automated prediction and assist clinical decision-making through an integrated and user-friendly web interface.
Technologies Used: HTML, CSS, JavaScript, Spring Boot, REST API, JWT Authentication, Python, TensorFlow, Deep Learning, DenseNet121, EfficientNetV2

EDUCATION

VIT Bhopal University B.Tech in Computer Science CGPA: 9.17	2023 – Present
Mount Litera Zee School, Goa AISSCE GPA: 8.70	2022 – 2023
Mount Litera Zee School, Goa AISSE GPA: 10.0	2020 – 2021

ACTIVITIES

- Finalist, VIT Bhopal – Johns Hopkins Health Hackathon (Feb 2025).
- Developed and presented an innovative healthcare solution to an expert panel.
- Diploma in Classical Music.
- Interests: App Development, Web Development, Full Stack Development, AWS.
